

Basis for stability and high
quality guarantee!

Dolce LLP with Dolce-Pharm brand

DOLCE-PHARM

The best producer in
Kazakhstan.

ISO 9001 EN ISO 13485

Catalogue

OUR MISSION:

Improving the quality of life and protecting people's health through development and implementation of innovative and affordable solutions in the field of disposable medical devices and medicines.

OUR PURPOSE (VISION):

To increase life expectancy of people, to minimize number of complications after surgery by creating a culture of widespread use of disposable medical products, products for prevention and improvement of health.

CONCEPT:

Dolce-Pharm:

Creation of unique logistics system that provides and promotes the culture of using disposable medical devices and medicines for prevention and improvement of health on a global scale, with special attitude towards customers and partners and timely delivery. Creation of culture of widespread use of disposable medical products, products for prevention and improvement of health.

Dolce:

Creation of modern enterprises that provide high level International Quality Standard for production of medical devices and pharmaceuticals that meet needs of external and internal consumers based on modern developing Quality Management System (QMS).

Dolce Group International enterprises

Creation of the Dolce-Pharm brand production franchises on all continents with guaranteed centralized supplies surrounded with developed network of distribution-sale franchises. Provide medical products to every country in increased demand. Introduce a new mentality of regular use of personal protective equipment everywhere.

OUR PRINCIPLES AND VALUES:

A consumer is the central figure in our business and we constantly work to identify their needs and wants and also strive to predict and satisfy their future needs.

System of effective business processes is a guarantee of providing our Clients with products of high quality level.

Our employees are our strategic resource. Management will make every effort to create an atmosphere where each employee can demonstrate his/her abilities, fully unleash creativity in order to achieve common goals.

The Company management ensures appropriate level of qualifications of employees, encourages education and self-education to improve their qualifications.

Our partners are our allies in achieving goals therefore we build relationships on the basis of mutually beneficial long-term cooperation.

Continuous improvement of products and processes based on analysis of customer feedback, results of internal audits and information about new technologies, both in manufacture of products and in management.

Identification of risks and opportunities, implementation of risk management actions to improve effectiveness of the QMS and prevent negative effects.

Top management of the Company is committed to meeting requirements of the quality management system and maintaining it.

About Dolce LLP with Dolce-Pharm brand

Dolce and Dolce-Pharm pharmaceutical production - sales association of companies is the largest Kazakh manufacturer of disposable medical products, professional consumables, disposable clothing and underwear (kits, masks, shoe covers, etc.) as well as medicines (activated carbon 0.25 No. 10 «Ultra Adsorb»). The association covers demand of medical institutions of the Republic of Kazakhstan, fulfills the state order for supply of medical devices and drugs under a long-term contract with SCF, is export-oriented for Central Asia and the CIS countries.

Disposal of medical devices

class B - «moderately hazardous (risky) medical waste»

• Used stabbing and other sharp objects (needles, pens, ampoules) are collected separately from other types of class B medical waste without preliminary destruction and disinfection.

• Outer package of safe disposal box should have indication "Hazardous medical waste. Class B" with name of unit, date and name of person responsible for collection of medical waste.

• Safe disposal boxes to be filled to no more than two-thirds of volume and should be stored at collection place for no longer than a day. After 2/3 of safe disposal box is filled out put it in a waterproof plastic bag and tie it up, close plastic solid containers tightly to exclude possible spontaneous opening then check their tightness.

• All manipulations to be done in special clothes (medical gown), disposable mask and disposable medical gloves (non-sterile).

• After packing, SDB to be transported to temporary storage room of SDB class B, where they should be stored for no more than three days. Every day after transportation of a class B medical wastes, the responsible person shall keep records in accordance with Appendix 5 of Order of the Ministry of Health of the Republic of Kazakhstan dated May 31, 2017 No. 357.

• Class B medical wastes storage room shall have temperature no more than + 5 ° C and equipped with:
 - refrigerator and freezers,
 - supply and exhaust ventilation,
 - bactericidal lamp,
 - sink with cold and hot water.

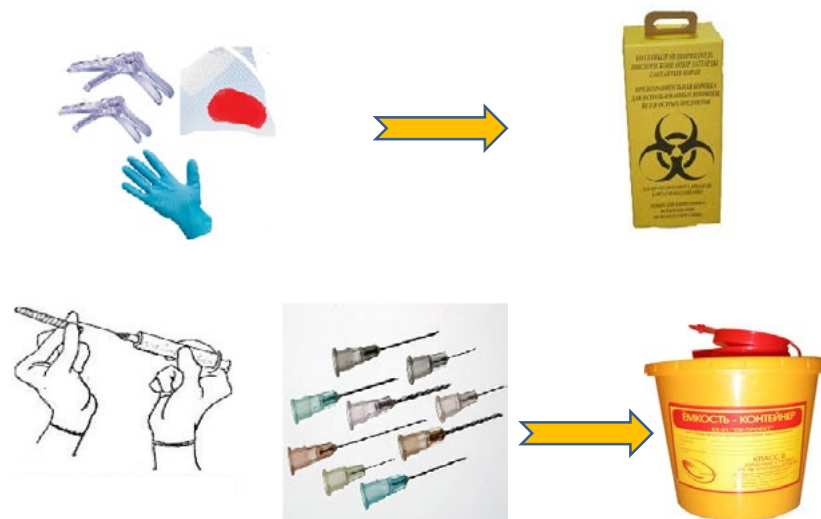

• Floor, walls and ceiling of class B medical wastes temporary storage room to be made of materials resistant to detergents and disinfectants, located near exit from building and have convenient access roads for removal. Ladders must be equipped with exit ramps.

Class B waste

Waste contaminated with human body fluids (blood, urine, fecal masses, saliva, etc.)

Collection of class B medical waste

• Temporary storage room shall be cleaned with disinfection after each loading of medical waste to a vehicle. Then it shall be treated with quartz and aired. (see SOP - conducting routine and general cleaning).
 After each dispatch of class B medical waste for disposal the responsible person keeps records of class B medical waste according to form given in Appendix 5 of Order of the Ministry of Health of the Republic of Kazakhstan No. 357 dated May 31, 2017. Organic liquid medical waste and class B wash water should be collected into disposable impenetrable moisture-resistant containers with a suitable disinfectant concentration with a lid to ensure their sealing prior to disposal. (see brief instructions on use of disinfectants).

• Used for biomaterial dishes to be collected in containers and disinfected in dezinfection substance of appropriate concentration, then disposed as medical waste class A. (see brief instructions for use of disinfectants)

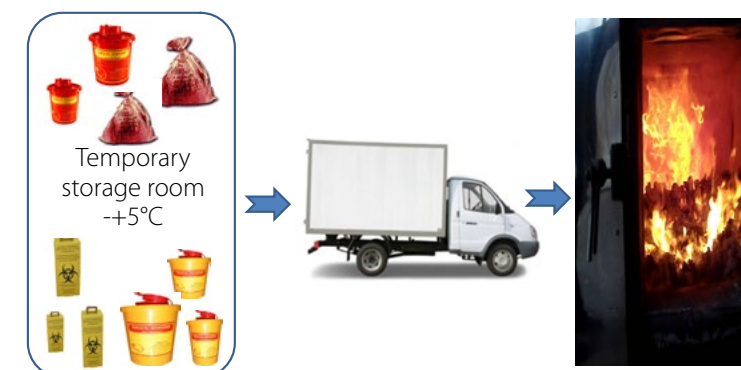

Storage times at waste generation sites

Collection, storage, disposal of class B medical waste

Transportation and disposal of class B, C medical waste

Temporary storage time

MATERIALS

Dolce LLP manufactures a wide range of products from various non-woven materials, the latest technologies. Use of such clothing can reduce the spread of nosocomial infections and postoperative complications.

Nonwovens:

- ◆ Breathe no worse than cotton or flax.
- ◆ Absorb moisture and retain it thanks to special fiber structure.
- ◆ Do not cause allergies since no chemicals are used in production.
- ◆ Combination of different layers allows to create the ideal option - water repellent, antibacterial, etc.
- ◆ Soft to touch and pleasant to body.
- ◆ Bend easily and give freedom of movement

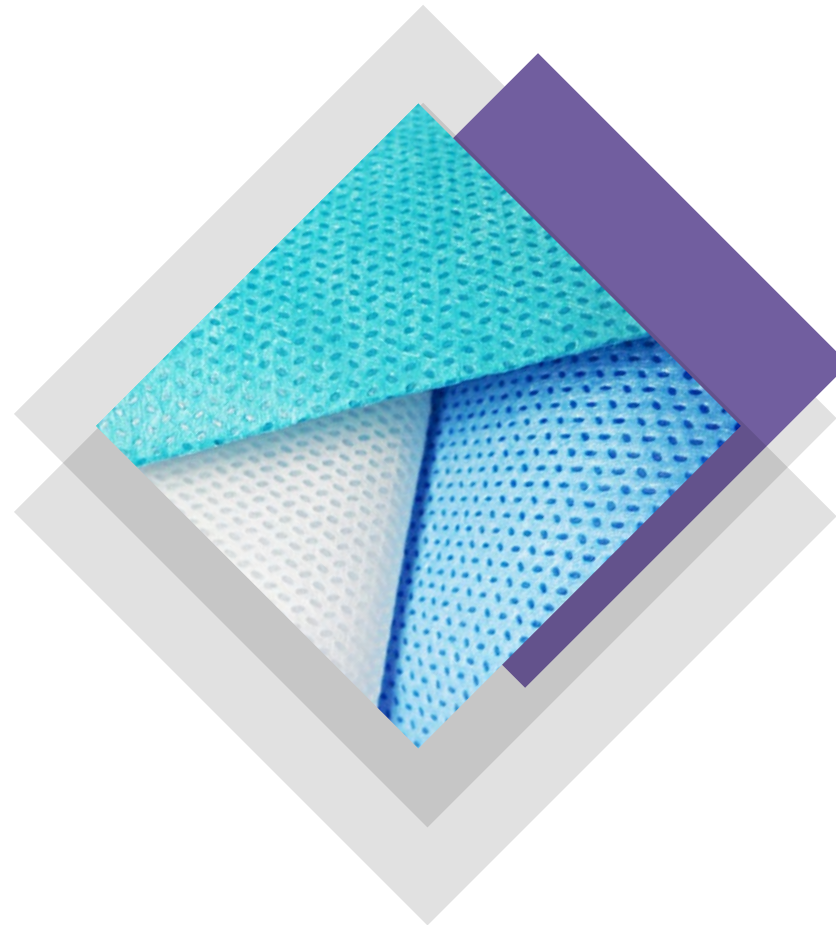

Spunbond - lightweight material made from endless thermally bonded polypropylene fibers. Main characteristics of Spunbond are its surface density and additional characteristics are: hydrophilicity, hydrophobicity, antistaticity, resistance to UV radiation, strength and resistance to tearing, breathability, softness and lightness, pleasantness in contact with skin

Meltblown - nonwoven fabric obtained from polypropylene microfibers 1-5 microns thick by blowing.

Basic qualities:

Due to thickness of fibers, meltblown has significant advantages over traditional nonwovens. These include greatly increased uniformity, both visual and physical, better coverage per surface unit, increased or complete water permeability with simultaneous breathability and high filtration properties. Meltblown has significant filtration, absorption and isolation effects.

This material has increased hydrophilic and barrier properties in relation to penetration of microorganisms, fungi, which allows it to be used as a filter layer in surgical masks, respirators. Meltblown has been successfully used in vacuum cleaner filters, respirators, industrial masks, filters for filtering liquids and even gases

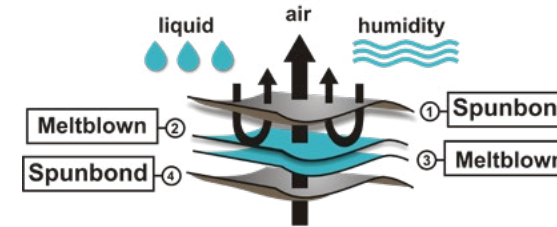

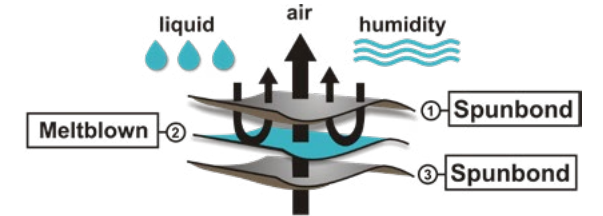

Series of products manufactured by type of nonwoven fabric:

Series - Budget (SMS) density 28 g / m²

Budget - Three-layer, lightweight, non-woven material with properties necessary for medical products - air permeability, strength, biological inertness, in addition, it does not absorb moisture and prevents penetration of various bacteria.

Series - Standard (SMS) density 40 g / m²

Standard - Three-layer nonwoven fabric SMS (spunbond-meltblown-spunbond) It has small thickness and density of material and properties necessary for medical devices - air permeability, strength, biological inertness. Spunbond plays a reinforcing role, intermediate layer of meltblown material has high barrier properties, in addition, it does not absorb moisture and prevents penetration of various bacteria.

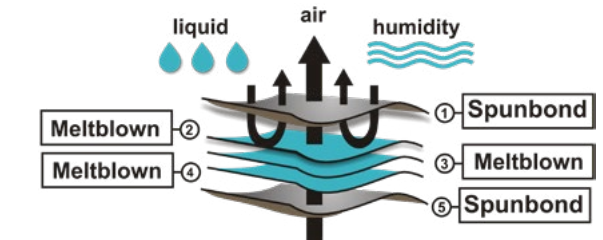

Series - Comfort (SMMS) pl. 40 g / m²

Comfort - Four-layer non-woven fabric (spunbond-meltblown-meltblown-spunbond). Spunbond plays a reinforcing role, the double intermediate layer of meltblown material has high barrier properties, in addition, it does not absorb moisture and prevents penetration of various bacteria.

Series - Luxe

Luxe - materials of class luxe (SMMMMS, Spunlace[®], Sunteys[®], Fibrell[®], Medicase[®], Softe[®], Wooldelpul[®], etc.) Innovative materials provide a high level of protection and comfort without hindering freedom of movement. It has excellent barrier properties and guarantees a high level of protection. Quickly removes heat from body, keeping cool and comfortable. Exceeds requirements of the European standard EN 13795 for water permeability, lint release, tear and burst resistance.

Laminated nonwovens

Laminated nonwovens (Laminated Spunbond, Laminated Spunlace, Medispan, Medics, etc.) are most often two- or three-layer. Spunlace, spunbond, paper, etc. are used as a base. A thin layer of molten polymer (polyethylene or polypropylene) is applied to them using special equipment.

Cusco speculum

Cusco speculum - gynecological, disposable, used in gynecological, obstetric, venereal and examination rooms of various medical institutions. Susco speculum allows you to inspect uterine cervix, in particular, its outer area as well as to take material for analyzes and some other manipulations.

We used experience of foreign and domestic manufacturers as well as wishes of doctors during development and production of the product. Length and shape of Cusco speculum handle provide maximum comfort when working with the tool. Classic design of lock ensures reliable fixation of leaves in selected position. Transparent leaves of speculum.

Cuzco - anatomical and highly functional. Dimensions of working «window» and its shape allow performing any medical and diagnostic manipulations. High precision of manufacturing of injection molds, highquality raw materials and modern organization of production guarantee high quality of speculum.

Masks with carbon filter Dolce-Pharm

Masks with elastic bands and carbon filter (three-layer)

Protective masks with elastic bands and carbon filter have a unique filter material consisting of fibrous activated carbon. Technological feature of this filtering material is that it contains 99.5% pure carbon and has a large sorbent surface. One gram of such material is capable of trapping up to 200 mg of harmful substances. Bacteria, viruses and molecules of pollutants to be removed are held on surface of activated carbon by intermolecular van der Waals forces. Carbon filter masks prevent harmful particles, molecules and viruses from entering through the filter element. Filtration efficiency of even submicroparticles up to 0.01 microns in size is 99.9%. Our company is the only manufacturer and supplier of this type of product in the domestic market.

PK-ИМН-5N®010007

Masks with elastic bands Dolce-Pharm

Masks with elastic bands for adults (three-layer)

Three-layer medical mask with elastic bands must certainly cover not only mouth, but also nose, fit tightly to face. Consider that the mask does not protect from virus itself, but from droplets that are released from a sick person when sneezing or coughing and after three hours it becomes unusable. Virus, together with droplets, can enter the body during conversation, if people are closer than one meter from each other. Therefore, this mask is recommended for those who are near a sick person.

Staff can easily control the change of masks by using colorful masks (each color for 3 hours)

Masks with elastic bands Dolce-Pharm

Masks with elastic bands for adults (three-layer)

Medical Three-layer mask (with elastic bands) - meets all requirements for personal protective equipment. Masks are made in automated way from three-layer polypropylene which provides increased protection against germs and bacteria. Moreover, the material has air permeability necessary for free breathing. Increased depth of folds of mask allows it to be conveniently positioned on the face, and a tight fit of upper part to the face is ensured by a hidden nasal retainer.

Masks for children Dolce-Pharm

Masks for children medical with bands (трехслойные)

Disposable medical mask (for children) is made of non-woven material. Equipped with elastic bands for secure fixation on head (elastic bands hold on ears). It provides a high degree of protection thanks to an additional filter layer. Nose clip is designed to fit tightly and provide maximum respiratory protection. Specially made children's mask - children wear with great interest, which gives full protection against viruses. It is recommended to wear no more than 2 hours.

Surgical-Microtex

Microsurgical, latex, textured, non-powdered, sterile gloves

Specialized surgical gloves Surgical-Microtex, anatomically shaped to minimize fatigue and stress for comfortable work during long hours. Micro-textured surface of gloves creates an anti-slip effect and provides a secure grip and hold of tool when working in wet conditions. Microsurgical gloves are thinner than standard surgical gloves and are highly sensitive at fingertips. Optimum strength provides adequate barrier protection. Cuff of glove is rolled up into a rim which facilitates putting on the glove and securely fixes it on sleeve of surgeon's gown. Special light brown color minimizes glare and eye strain in surgery room.

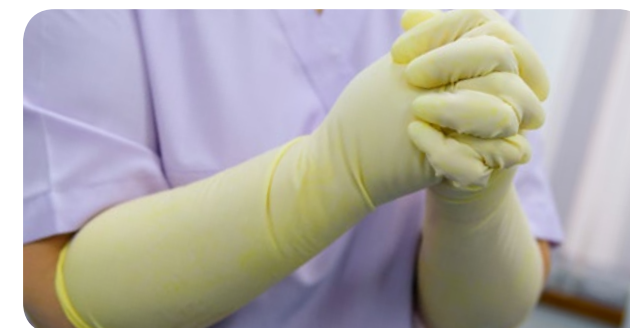

Application area
Gloves are used for surgeries requiring the highest tactile sensitivity of fingers in the following areas:

- microsurgery;
- cardiac surgery;
- neurosurgery;
- ophthalmology;
- oncology;
- pediatric surgery
- vascular surgery;
- plastic surgery and others.

Name	Amount in a package	Transport pack	Registration number
Surgical-Microtex	pair/50 pair	250 pair	PK-ИМН-5Н®015975

Surgical-Gin

Gynecological (with high cuffs) latex, smooth, non-powdered, sterile gloves

Specialized surgical gloves Surgical-Gin, anatomically shaped to minimize fatigue and stress for comfortable work during long hours, with high cuffs for deep penetration procedures, with edges rolled into a rim / or without it. The rim ensures tight fixation of glove on hands of medical staff, without squeezing the forearm. Elbow length gloves help doctors avoid direct contact with blood and mucous membranes.

Application area
Gloves with elongated cuff are used during manipulations:

- in obstetrics and gynecology;
- thoracic and abdominal surgery;
- urology and proctology;
- in obstetric institutions as examination gloves.
- veterinary medicine.

Name	Amount in a package	Transport pack	Registration number
Surgical-Gin	pair/50 pair	200 pair	PK-ИМН-5Н®015974

Surgical-Ort

Orthopedic, latex, textured, non-powdered, sterile gloves

Surgical-Double

double-coat with puncture indication, latex, textured, non-powdered, sterile gloves

Gloves for diagnostic, examination, latex or nitrile, non-powdered, powdered, textured, non-sterile. Ambidextrous shape (suitable for both left and right hand).

Seamless gloves with edges rolled up into a rim. Cuff with rim ease putting over, prevent rolling up and provide a better fit. Available in various colors.

Used in various specialized fields of medicine, including: labs, medical institutions,

PK-IMH-5N®019847

Nitrile gloves

Gloves MPG for diagnostic, examination, nitrile, non-powdered, textured, non-sterile, size: XS, S, M, L, XL, in boxes No. 10, No. 50, No. 100, No. 200pcs

diagnostic centers, aesthetic medicine. Also used for general use, veterinary medicine, food industry.

Designed to protect hands from harmful and toxic substances, chemical influences as well as to protect patient and medical personnel from contact infection during medical and diagnostic examinations, procedures or research.

Specialized surgical gloves Surgical-Ort, anatomically shaped to minimize fatigue and stress for comfortable work during long hours. Textured surface of gloves creates an anti-slip effect and provides a secure grip and hold of tool during work. Main distinguishing feature is increased thickness and strength.

Application area

Designed to protect medical staff and patient from mutual contamination and when working with contaminated materials. It is used in orthopedics, traumatology, dental surgery, medical treatment of musculoskeletal system and other surgical operations that require increased resistance to mechanical damage.

Specialized surgical gloves Surgical-Double, anatomically shaped to minimize fatigue and stress for comfortable work during long hours. Micro-textured surface of gloves creates an anti-slip effect and provides a secure grip and hold of tool when working in wet conditions. Smooth surface of inner glove allows for a free, even putting of the outer glove.

Sealed package contains one pair of outer gloves according to size indicated on the package and one pair of inner gloves is 1/2 size larger. Full anatomical shape outer gloves have curved fingers. Green or blue gloves shall be put on first; then light-skin (white) gloves shall be put over them. Green or blue spectra are contrasting to blood thus giving a bright color indication. Liquid (blood, rinsing water, etc.), even if colorless penetrates between the gloves when gloves are worn, as a result, indication in the form of dark spots is formed in the puncture area. Timely puncture detection and glove replacement significantly reduce the time of contact with patient's blood and reduce the risk of infection of healthcare professional.

Application area

Double gloves are used at high likelihood of injury and infection during surgical procedures. It is used to isolate hands during various manipulations:

- in urgent surgical operations, operations of patient infected with hemocontact infections;
- during vaccination,
- when working with biomaterials in laboratory;
- during examination and treatment of infected patients.

Polyethylene gloves Dolce – Pharm non-sterile, disposable

Disposable polyethylene gloves made of polyethylene, density of 8 to 18 microns. Gloves are not anatomically shaped, with smooth or textured surface. Textured surface provides a secure grip on tools.

Application area

Treatment-and-prophylactic institutions, food industries, catering establishments, cleaning organizations, cosmetic institutions, home, etc.

Designation

To protect hands from moisture, detergents, chemicals and other contaminants and to ensure adequate hygiene.

For those who care about quality!

Special raw materials from charcoal of a special Permian birch are used for production of activated carbon Ultra - Adsorb. Innovative manufacturing technology allows to obtain increased number of micropores, aslo finely balanced selection of fillers enhances the absorbing properties of coal. Since 2006 activated carbon is on the Kazakhstan market. As of today, Dolce-Pharm is the only domestic manufacturer of the Ultra-Absorb activated carbon drug.

As enterosorbent agent in complex therapy, the drug is indicated for: Renal failure, chronic hepatitis, acute viral hepatitis, liver cirrhosis, atopic dermatitis, bronchial asthma, gastritis, chronic cholecystitis, enterocolitis, cholecystopancreatitis, treatment of allergic diseases, treatment of metabolic disorders.

Indications

- exogenous and endogenous toxicosis of various nature (as a detoxification agent)
- food toxicoinfections, salmonellosis, dysentery (in complex treatment)
- poisoning with drugs (psychotropic, sleeping aid, narcotic drugs, etc.), alkaloids, heavy metal salts and other poisons
- diseases of gastrointestinal tract accompanied by dyspepsia, flatulence
- food and drug allergies-hyperbilirubinemia (viral hepatitis and other jaundice)
- hyperazotemia (renal failure)
- ultrasound and X-ray examinations (to reduce gas formation in intestine).

Contraindications

- individual drug intolerance
- exacerbation of gastric ulcer and duodenal ulcer
- nonspecific ulcerative colitis
- bleeding from gastrointestinal tract
- intestinal atony
- children under 6 years old

Activated carbon Ultra-Adsorb

Rapidly dissolving (decomposition in 9 sec) activated carbon with increased absorption capacity.

Transport pack

1500 pcs.
